

TYPE
Project

TOPIC
Digital skills and uses

OBJECTIVES

Discover the new digital uses and the new jobs to come.

Make computing and coding more accessible.

Raise awareness about the uses of networks and the internet.

BENEFICIARIES

All clients, childrens, teenagers, adults, NEETS,etc.

**NUMERI'DAY :
ENTER INTO THE DIGITAL ERA !**

► **DESCRIPTION**

On the territory, digital literacy becomes increasingly important, as we can see with the creation of the territorial area of Beauvaisis « Agritech innovation and digital agriculture » and the creation of Digital School in 2017 which offers trainings in web developping and integration by the regional Authority and other external organisations. That is why the Cité des metiers de Grand Beauvaisis has choosen to create an annual event concerning the digitalisation of professions.

Activities carried out during that day :

- exhibition (data Scientist, graphic designer, 3D architect etc.);
- presentation and use of several digital tools (3D printer, virtual reality headsets etc.);
- Fablab and broadcasting of movies, reports, interviews about digital.

► **KEY FIGURES**

- 250 participants (younger people from the social centres, people from the community help project for young people and also a lot of school groups and adults).
- 10 partners mobilized (digital professionals, traning organisations).

► **RESULTS AND IMPACT**

Very positive feedbacks from professionals concerning the atmosphere, the interest of the clients for the event and the large range of clients (from children in summer camps to seniors in career change). Another edition should be organized by the end of 2019.
